About Me

I am a multidisciplinary leader, shaped and motivated by people and technology. With more than 15 years of experience in the area, I have gone through engineering, operation, architecture and business, consolidating essential experiences that helps me today in decision making, whether tactical or strategic.

Specialized in Architecture, Software Engineering, Big Data and Analytics.

I always try to update myself with the latest technologies and concepts, and based on experience be able to offer the best possible strategy line, always considering budget, deadlines, risks and team capacity.

Education

College Jan 2013 - Dec 2014
FIAP
Systems Analysis and Development

Experience

Manager - Data Platform Apr 2025 - Nowadays
Madeira Madeira
Brazil (remote)

Leading the technical team responsible for the enterprise-wide Data Mesh initiative on GCP. I oversee the end-to-end architecture, from multi-cloud data ingestion (AWS to GCP) to advanced analytics enablement. My team builds and maintains scalable Medallion lakehouses using BigQuery, Dataflow, Datastream, and Dataform, while strictly enforcing DevOps best practices (Terraform/SpaceLift) and data governance (GCP DLP) to empower the business with secure, high-performance data products via Looker Studio and Vertex AI.

Data Architect Nov 2024 - Oct 2025
Second Nature
United States (remote)

Develop and implement cloud-based data solutions on Google Cloud Platform (GCP), specializing in data warehousing, data pipelines, and data governance. Design and deploy data architectures using tools like BigQuery, Dataflow, Dataform, and Dataplex to ensure efficient data management and analysis.

Skills

Leadership & Management Strategic

Strategic Thinking

Planning & Organizing

Cloud
GCP, Amazon AWS, Azure, Oracle, IBM, Huawei

Big Data & Analytics
Experience in big data, real time and artificial intelligence solutions on On-Premises, GCP, AWS and Azure
Jupyter, DBT, Spark, Snowflake, Databricks, Airflow, BigQuery, Dataflow, Dataproc, Dataform

Architecture & Engineering
Solutions architecture, technology and main concepts. Big Data, Analytics, A.I, Gen. A.I, Real Time Processing, DataLake, Data Streaming, Complex Event Processing, In-Memory, Microservices, Service Mesh, SOA, Blockchain, IoT, Security, TOGAF, DDD, Event Sourcing, Event Driven, APIs, Messaging, Containers

Data Storage
BigQuery, BigTable, Spanner, Cloud Storage, S3, Oracle DB, SQL Server, MySQL, Cassandra, ScyllaDB, MongoDB, Redis, Neo4j, HBase, HDFS, Hive, Elasticsearch, Ignite, DuckDB

Software Development
Java, Scala, Kotlin, Python, SQL and Javascript

Lead Data Engineer

Nov 2023 - Oct 2024

Boston Scientific

United States (remote)

I led a global data analytics team on a project for a multinational company in the biotechnology sector.

Snowflake Cloud · Amazon Web Services · Google Cloud Platform (GCP) · Python · Airflow

Data Architect

Mar 2023 - Nov 2024

SAUTER

Brazil (remote)

Responsible for both AI/Data pre sales engineering/architecture and also for project delivery journey (planning, design, development, operation).

Google Cloud Platform (GCP) · Amazon Web Services · Windows Azure · Artificial Intelligence (AI) · Big data · Data Analytics · Gen. A.I.

Solutions Architect

Mar 2023 - Jul 2024

BRB (Bank of Brasília)

Brazil (remote)

I was responsible for BRB's corporate technology, focusing on Big Data, Analytics and Transactional Services. Planning and construction of the bank's data automation, cloud journey, as well as the foundation of the corporate Data Lake and construction of enterprise level architectural standards.

Solutions Architect

Jan 2023 - Mar 2023

Carrefour

Europe (remote)

I worked as a cloud architect focused on Big Data and Analytics applied in Cloud GCP, using datamesh concepts, segregation by domains, data cataloging, batch and real time processing.

Technologies used: Composer, Dataflow, Spark, Spark Streaming, Data Catalog, BigQuery, Cloud Storage, Cloud Build, PubSub, GKE, Cloud Functions · Google Cloud Platform (GCP) · Amazon Web Services · TOGAF · Big data · Apache Spark · GitLab · Artificial Intelligence (AI) · Data Analytics

Technology Advisor

Apr 2022 - Dec 2023

METATEXT.AI

Brazil (remote)

I'm a part-time technology advisor helping with Metatext architecture and engineering.

Solutions Architect

May 2022 - Sep 2022

ROX Partner

Brazil (remote)

I participated in a project at a large financial client, working on modernizing their architecture in a journey to the cloud of an on-premise stack for GCP.

Solutions Architect

Apr 2022 - Sep 2022

eMotion Studios

LATAM (remote)

I was acting as a cloud architecture specialist (GCP) for Bank Ripley, located in Chile, where I created and led the global disaster recovery plan for the client's entire cloud infrastructure.

Technology Manager

Nov 2021 - May 2022

Will Bank

Brazil (remote)

Responsible for managing the will bank FI(financial institute) engineering team.

Head of Data & Analytics

Mar 2020 - Nov 2021

Equifax

Brazil & U.S (remote)

Team management of about one HUNDRED (100) people divided into FOUR (4) verticals being DATA, ANALYTICS, PLATFORMS & GOVERNANCE, and TECHNICAL PROJECTS.

I also lead the digital transformation in Data & Analytics, aiming at the reconstruction of all legacy projects in a multi-icloud and scalable architecture, fully automated with solid processes and governance, considerably increasing product delivery performance, reducing costs and meeting regulatory issues and law-compliance.

CTO

Jul 2019 - Mar 2020

STiT Data

Brazil (remote)

Strategic leadership focused on directing the company's technology foundation, based on current technology trends and providing recommendations. Application / Systems assessment for compliance with corporate and commercial standards, as well as determining the viability of architecture related to organizational changes. And also provide the best guidance to the technology team on best practices.

Lead Architect

Jul 2016 - Jul 2019

Santander

Brazil & Europe (on-site)

Referenced Architect for Santander big data projects.

Environment: Hadoop/Cloudera,Workbench, Apache Hive, Apache Ignite,

Impala, Flume, Sqoop, Oozie, HBase, Redis, Neo4J, Kafka, Kafka Streams, Storm, Zookeeper, Elasticsearch, Kibana, WSO2 CEP, Siddhi, Spark, Spring Boot, Docker.

Software Engineer

Jul 2014 - Mar 2016

inPaaS

Brazil (on-site)

Lead the planning, implementation, maintenance and development of dynamic platform dedicated to the development of small projects to midsize focused on cloud, with notions and abstraction of data persistence, service layer, dynamic rendering of the front-end, and consumption / exposure of SOAP and REST services dynamically. Implementation of the concept of microservices to the back-end distribution. Development based on HTML 5 for the front-end mainly to the implementation of the Drag and Drop contained in the platform for assembling dynamic screens, and back-end Java 1.8 pure applied in performance, apache tomcat 8 as the default server.

Staff Engineer

Sep 2013 - Aug 2014

Unicorp

Brazil (on-site)

Managed and lead the development of system, made in Java, for laboratory management (LIMS) SaaS (System as a Service) using SOA concepts (Service Oriented Architecture) and Microservices Standard, and applying integration techniques together with the newest technologies used in market, as MuleESB for integration, Apache CXF to the services layer, JPA with Hibernate 4 for persistence, NodeJS middleware with AngularJS on the front end.

Software Engineer

Nov 2012 - Sep 2013

Plusoft

Brazil (on-site)

I was responsible for development solutions using Java EE along with frameworks (Struts, JSF, Spring) and Tomcat servers, JBoss and Websphere to apply enhancements, customizations and / or corrections to the product of the company, which is a CRM.

Software Engineer

Apr 2011 - Nov 2012

Telecom Italia (TIM)

Brazil (on-site)

Responsible for establishing and maintaining internal security control processes using Java.

Infrastructure Analyst

Sep 2008 - Apr 2011

Infratek

Brazil (on-site)

Maintenance of computers and notebooks in general. Organization and maintenance of networks with remote support. Installation of operating systems, drivers, and various programs. technical assistance remotely (via phone or remote access). Hardware cleaning, with due handling processors and boards. Development of the company's care portal using Java.
